

Hot Dates 2003

This table presents planetary events during 2003, sorted by date and time. Besides the usual ingresses, stations and aspects (conjunctions, oppositions, squares, semisquares, sesquiquadrates, trines, sextiles, parallels and contraparallels), it shows often-omitted events including transits to a station degree, maximum elongation, zero latitude and declination, perihelion and aphelion, perigee and apogee, and lunar occultations. All these are sorted in one chronological sequence so that you can see when these key events in planetary cycles reinforce the more conventionally recognized astrological events. Besides listing aspects when they become exact, this table also includes two important frustrated aspects which would not ordinarily show up in tables of this sort (see Sep 15 and Oct 3, Oct 15 and Nov 13). It also shows when five or more planets are clustered in an arc of less than 20 degrees (see Jun 28 and 29).

Key: Sun=Sun, Mon=Moon, Mer=Mercury, Mar=Mars, Jup=Jupiter, Sat=Saturn, Ura=Uranus, Nep=Neptune, Plu=Pluto, NNo=Lunar North Node, Ar=Aries, Ta=Taurus, Ge=Gemini, Cn=Cancer, Le=Leo, Vi=Virgo, Li=Libra, Sc=Scorpio, Sg=Sagittarius, Cp=Capricorn, Aq=Aquarius, Pi=Pisces, Cnj=Conjunction, Opp=Opposition, Sqr=Square, Tri=Trine, Sxt=Sextile, SSq=Semisquare, Sq=Sesquiquadrate, Pll=Parallel, Cpl=Contraparallel, N=North, S=South, E=East, W=West.

Day	Date	GMT	Pt 1	Pt 1's Position	Event Type	Pt 2	Pt 2's Position	Remarks	Magnitude
